

are included in the scope of the invention as defined by the following claims:

## AMENDMENTS TO THE CLAIMS

Please amend claims 1-5 as follows:

1. (currently amended) A sand and seed divot replacer comprising:

a spout including an elongate, hollow ~~spout body~~ main body portion having a hollow bent pour spout integrally formed at a first end thereof and a female threaded portion integrally formed on the interior surface of the ~~spout body~~ main body portion adjacent a second end thereof;

a bottle including a main body portion open at the top and closed at the bottom with a bottom wall;

the bottle further including a male threaded portion on the exterior surface of the main body portion adjacent the open top for threadably mating with the female threaded portion of the spout; and

a hollow holder means having a main body portion open at the top and closed at the bottom with a bottom wall for holding the bottle and spout;

the holder means sized to receive the bottle within the interior thereof;

the holder means further including a mounting bracket means integrally formed on the exterior surface of the main body portion of the holder means for mounting the holder to a support structure; ;

the bottle having a cylindrical shape with a longitudinal axis, and wherein the bottom wall of the bottle includes a concave indented portion extending inwardly and wherein the bottom wall of the holder includes a plurality of cut-outs spaced around the periphery of the bottom wall and further includes a convex indented portion extending inwardly and positioned and sized for nesting in the indented portion of the bottle when the bottle is positioned within the holder;

the indented portion of the bottle and the indented portion of the holder having a corresponding hemispherical shape;

the main body portion of the spout extending in a direction generally coaxial with the longitudinal axis of the bottle;

the bent pour spout extending in a direction generally perpendicular to the longitudinal axis of the bottle and having a length less than one-third the length of the main body portion;  
and

a pair of finger grips provided on the main body portion directly beneath the bent pour spout.

2. (canceled)

3. (canceled)

4. (canceled)

5. (currently amended) The said divot replacer of claim # 1 wherein the main body portion of the spout includes an enlarged portion at the second end thereof and wherein the female threaded portion is positioned within the enlarged portion.
